How it works

CodeTwo Email Signatures for Office 365 uses cloud services located in Microsoft datacenters to process your emails in order to add auto-signatures to them. The program will let you automatically reconfigure your Office 365 mail flow to safely relay your messages through CodeTwo Email Azure Services.

Reliability and security

Rest assured your emails are safe as they never leave Microsoft datacenters. We've also worked hard to meet all high security and reliability standards of business communication:

 Powered by ISO 2701 certified Microsoft Azure	 OAuth 2.0 protocol safeguards your credentials	 Support for multi-factor authentication	 TLS encryption and authentication	 No external endpoints	
 Geolocation of your choice (GDPR compliant)	 Private storage for your settings	 Your emails are not stored or read	 Efficient load balancing and scalability	 Unnoticeable delay	 99.99% uptime

"I'm confident that administrators would be saved a great deal of configuration headaches if they used CodeTwo solutions"

J. Peter Bruzesse
(Microsoft MVP)

"As a Microsoft trainer, I never hesitate to recommend CodeTwo products while conducting sessions on Office 365"

Kamil Bączyk
(Microsoft MVP)
